Penetration Tester

[LinkedIn](#) · [Github](#) · [Tryhackme](#)

OBJECTIVE

Computer and Systems Engineering graduate with a strong foundation in networking, cybersecurity, and software systems. My interests include machine learning and artificial intelligence, and I am currently specializing in penetration testing, where I assess the security of networks and applications by identifying vulnerabilities and recommending effective remediation strategies. I am passionate about continuous learning and applying technical skills to solve real-world security challenges.

EDUCATION

College – Bachelor's, Electrical Engineering, Computer and Systems Major
Faculty of Engineering, Ain Shams University

Jun 2026

CERTIFICATIONS

- Cisco Certified Network Associate (CCNA) v1.1 200-301
 - Practical Ethical Hacking (PEH)
 - Red Hat Linux System Administration 1
 - eLearnSecurity Junior Penetration Tester (eJPT) v2
 - ITI Mahara-Tech Cybersecurity Path Completion
 - ITI Mahara-Tech OWASP Top 10 (Web)
-

EXPERIENCE

Digital Egypt Pioneers Initiative (DEPI)

Jun 2026 - Present

Internship

- Conducted hands-on experience in **Infrastructure & Security, Vulnerability Analysis & Penetration Testing**.
 - Used tools including **Metasploit, Nmap, Dirbuster, ffuf, John The Ripper, Hashcat, Hydra, Linpeas, Wireshark**, and **SQLmap** for reconnaissance, enumeration, vulnerability discovery, and exploitation.
 - Performed practical engagements covering **network enumeration, web application attacks, privilege escalation, password attacks**, and **post-exploitation, documenting findings** and **remediation recommendations**.
 - Architected a multi-domain **Active Directory** lab environment to execute **Kerberoasting, AS-REP Roasting, SMB Relay, LLMNR**, and **Pass-the-Hash** attacks using **BloodHound, enum4linux, crackmapexec, Mimikatz**, and **Impacket**, achieving full domain compromise and documenting remediation strategies.
 - Analyzed and exploited web application attack vectors—including **Injection, XSS, CSRF**, and **Broken Authentication**—across 50+ **PortSwigger** labs using **Burp Suite** Professional, achieving a 100% lab resolution rate.
 - Executed End-to-End Penetration Testing: Automated reconnaissance, vulnerability exploitation, and Active Directory attacks across network and web environments using custom **Python/Bash** scripts.
-

PROJECTS

SmartShield IPS Graduation Project

Spring 2026

- Designed and Executed Security Testing: Built an attack testing framework simulating real-world adversarial techniques—including **XSS, authentication bypass, race conditions, resource exhaustion, adversarial AI**, and **OT-specific attacks**—to evaluate IPS detection and prevention capabilities.
- Exploited System Weaknesses: Identified critical security vulnerabilities across network and application layers, analyzing failure points in threat detection and evasion handling.
- Formulated remediation technical reports and collaborated with developers using GitHub, successfully closing 100% of identified security bypasses and lowering false-positive detections.
